Empowering Cybersecurity Excellence in Energy

November 15th, 2024 – 11:30am-1:00pm CT
Colton's Steak House – 5 Eastport Plaza, Collinsville, IL 62234

A Seminar Exploring the Threat Landscape in Energy

Join us for an engaging 45-minute session where we delve into the critical topics of cybersecurity and energy. Our speaker from Anderson Technologies will provide valuable insights into:

- **Cybersecurity Considerations for Renewable Energy:** Explore the unique cybersecurity challenges faced by the renewable energy sector. Understand the importance of data protection, operational risk management, third-party risks, and the proximity to the bulk electric system (BES) to safeguard your energy infrastructure.

- **Nation-State Sponsored Attacks on Our Power Grid:** Dive into the alarming rise of nation-state sponsored cyberattacks on power grids. Learn about the statistics, methods and tactics employed by bad actors, and review a real-life case study to understand the impact and necessary defenses.

- **OT Cybersecurity Activities:** Gain insights into securing your Operational Technology (OT) environments. Discover essential activities to protect OT systems and establish the fundamentals for a robust cybersecurity posture.

Don't miss this opportunity to elevate your understanding of how the energy sector is being shaped by cybersecurity. Our fast-paced and interactive seminar is designed to keep you engaged while providing essential knowledge to help protect your organization.

Corbitt Grow
Director, Business Development

Coming from AT&T's Network Solutions team, Corbitt now leads Anderson Technologies' business development staff to help bring cybersecurity and support to business enterprises.
